

ABSTRACT

A lightweight portable tree stand incorporating a detachable reclining seat which is used in an elevated position removably affixed to a tree's trunk. With the recliner tree stand installed on a tree and the user sitting in a reclined position, and upon seeing the quarry, stands, releases the seat, and then has easy access to the entire platform allowing for enhanced, mobility, safety, and visibility of the area below. In the user releasing the seat the seat swings to the tree's trunk, this along full access to an otherwise limited surface area.
